About me

I am a **Senior Backend Engineer** from Brazil, focused on building scalable, maintainable and API-first systems with **PHP, Laravel, PostgreSQL, Docker, Linux and AWS**.

My strongest background is in backend engineering, API architecture, database performance, third-party integrations and legacy system modernization. I also work comfortably with **Vue.js, Nuxt and Tailwind CSS**, especially when building frontend integrations for backend-driven products.

I have worked with SaaS platforms, internal enterprise systems, automotive platforms, business tools, financial/business integrations and custom web applications. My work usually involves designing APIs, improving architecture, optimizing queries, refactoring legacy code, creating reliable development environments and helping teams make better technical decisions.

I also work as a programming mentor, teaching PHP, Laravel, Linux, Docker and software engineering fundamentals.

What I do best

- Design and maintain API-first backend systems.
- Build scalable Laravel applications.
- Modernize legacy PHP/Laravel codebases.
- Optimize PostgreSQL and SQL queries.
- Integrate external APIs and business services.
- Structure Docker-based development and deployment environments.
- Improve code organization, maintainability and technical consistency.
- Support teams with technical consulting and mentoring.
- Build Vue/Nuxt interfaces connected to backend systems.

Main stack

Backend & APIs

Databases & Cache

DevOps, Cloud & Tools

Frontend integration

Featured Projects

Hour Ledger

Client hour management application with a Vue 3 frontend and a backend API.

- Frontend: [Client-Hour-Management-APPs-CC-frontend](#)
- API: [Client-Hour-Management-APPs-CC-backend](#)
- Stack: Vue 3, Vite, Node.js, Vercel API
- Type: real application

GitHub Projects Stats

A Nuxt application for displaying GitHub project statistics.

- Repository: [gh-projects-stats-nuxt](#)
- Stack: Nuxt.js
- Type: real application

Laravel Vue Admin With Inertia

Admin foundation/prototype built with Laravel, Vue and Inertia.

- Repository: [Laravel-Vue-Admin-With-Inertia](#)
- Stack: Laravel, Vue, Inertia
- Type: admin foundation / prototype

SuperPOS Vue

Point of sale application built with Vue 3 and Vite.

- Repository: [SuperPOS-Vue](#)
- Stack: Vue 3, Vite

- Type: real application

Personal Website, Blog & Forms

Personal website with portfolio, blog structure and forms.

- Repository: [Site-com-blog-portfolio-Forms](#)
- Stack: Nuxt.js
- Type: real application

Customer Reviews AI Summary

Application that summarizes customer reviews using AI.

- Repository: [customer-reviews-ai-summary-nextjs-vercel](#)
- Stack: Next.js
- Type: real application / AI experiment

Other Projects & Experiments

TailwindCSS v4 Cheat Sheet

A practical Tailwind CSS v4 reference app.

- Repository: [TailwindCSS-v4-Cheat-Sheet](#)

RecScreen

Screen capture application built with Vue 3.

- Repository: [Screen-Capture-Vue3-App](#)

Time Calculator

A simple time calculator built with Vue 3 and Vite.

- Repository: [Time-Calculator](#)

Avatar SVG Generator

Nuxt application for generating SVG avatars.

- Repository: [Nuxt-Avatar-Generator](#)

► More experiments

Professional Highlights

- Experience with SaaS platforms and business-critical backend systems.
- API architecture and third-party service integrations.
- Legacy Laravel modernization and technical debt reduction.
- PostgreSQL and SQL query optimization.
- Dockerized development and deployment workflows.
- AWS services such as EC2, RDS, S3 and Lambda.
- Technical consulting for architecture, performance and maintainability.
- Programming mentoring from beginner to advanced level.
